## **Non-Surgical Breast Lift**

**The Henley Clinic non-surgical breast lift can give your breasts a lift of up to 1-2 cm.**

The Henley Clinic breast lift is perfect for A and B cup breasts and in some cases C cups can also result in a successful list.

The procedure is simple, non-invasive and is achieved with injections of botulinum toxin (Botox) into the muscular area under your breasts.

Firstly you will have a free and without obligation consultation with our medical specialist, where you can outline what you would like to achieve, the specialist will explain what they believe can be achieved for you, outline the procedure in depth and answer any questions you may have.

Our specialist will also be able to take you through some clinical trials that have been performed and some before and after photographic results.

### **THE PROCEDURE**

Botulinum toxin (Botox) is injected into the specific targeted muscles under your breast area this will slightly weaken the injected muscles. This means the muscles above the breasts will be stronger than the injected ones below and hence the stronger muscles will lift the breast/s.

The treatment is relatively pain free, as the procedure is performed with a very fine needle although you can opt for an anaesthetic cream to be applied.

This treatment will also work effectively if your breasts are not symmetrical as the treatment will be able to even them up.

Simply book for your free and without obligation consultation,
