Lines and Wrinkles Dermal Fillers Prices from £320.00

**Dermal fillers utilised in the Henley Clinic are
the Belotero and Restylane ranges**

At the Henley Clinic we utilise one of the most advanced fillers on the market today; **Belotero** along with the most widely used **Restylane**. The injecting physician will recommend the best option for your skin type and depth of lines and wrinkles

Over time our skin succumbs to the ageing effect, losing its elasticity, suppleness and youthful look, these result in lines and wrinkles across the face and over time do become deeper and more noticeable.

Hyaluronic Acid is a substance that occurs naturally in the body and plays an important role in the hydration of the skin, giving it volume and a smooth appearance. Unfortunately as we get older production of hyaluronic acid declines and lines and wrinkles appear as the skin loses hydration.

Belotero contains hyaluronic acid along with a unique production process. Belotero is a particularly soft smooth gel that the Henley Clinic has tested and is our dermal filler of choice.

Belotero gives a smooth result to facial lines and wrinkles;

- Between the eyes (glabellar)
- Lines between the nose and mouth (nasolabial)
- Lines around the mouth (marionette lines)
- Fuller lips
- Lines at side of eyes (crows feet)
- Décolletage area

See below for before and after treatment photos

Belotero is an injectable that results in a beautiful natural appearance and can last in excess of 9 months.

Restylane also contains Hyaluronic acid and is available for medium and superficial lines along with **Restylane-Perlane** for deep heavy lines and wrinkles

The treatment with either consists of crystal clear gel injected into the skin in tiny amounts with a very fine needle along the line of the wrinkle. The injected gel integrates with the natural tissue and allows free passage of adjacent tissue for oxygen and hormones to pass between fragments of the gel. The result is to smooth out your lines and wrinkles and achieve a healthy, natural looking skin.

These Dermal Fillers can be used very successfully in conjunction with botulinum toxin (Botox/Dysport) for upper face and dermal fillers in the lower face.
